- Chris Axford, CEO
- John Heim, Technology Specialist: EHR Systems

Embedding IT Within a Team Based Model of Care

Leadership Team

Program Teams

Direct Service Teams/Huddles

Bridging the Gap

Finance

Clinical

Technology

Continuous Quality Improvement

Questions to Ask

- What do we want to achieve?
- What is our current process?
- What clinical changes need to occur?
- How will our technology support this?

Stretch Your Skillsets

Technology

Quality of Care

Billing

Clinical Directors

Innovation

Data Reporting

Who on your team, in any area, has the skills/abilities/interest, to serve as a mentor to the organization? Look at cross-training opportunities.

Pathway to Success

- Get executive buy-in and involve the experts
- Create definitive Clinical Workflows
- Create a solid data plan
- Make the necessary changes to the system
- Create a Training Plan
- Test the system
- Implement changes and support the staff
- Report on the data: use the data plan; use the data to help make decisions

Pathway to Success (cont'd)

- Monitor your data through CQI (prevent garbage in/garbage out)
- Communicate with your key players in ways they can understand
- Review your processes and make adjustments as necessary

Staff and Process Goals

- Involve people who are invested in your mission
 - Physicians/Prescribers, DCOs
- Create a supportive environment and cultivate the staff
 - Supporting technology conferences for IT and non-IT staff
- Focus on the ultimate goals --- care and outcomes
- Elevate CQI to empower them and allow them to make recommendations
- Constantly question IT so they provide appropriate opportunities and feedback

The Multidisciplinary Approach in Practice

The Challenge of the Clinical Quality Outcome Measures: BCC's Data Reporting Subcommittee

Chief Operating Officer (as needed)

CQI Director

EHR Director

Data Evaluator

Clinical Care Coordinators

Billing Manager (as needed)

Clinical Directors (as needed)

Clinical Quality Measures Data Plan

- Measure definition
- Data collection: who is responsible for data entry, how will it be stored, how will the data be reported?
- Data integrity: how will the data be monitored, who will hold staff accountable?
- Data reporting: where is the data, what manipulations/calculations need to occur?
 - Use of advanced reporting tools (BI)

Potential Pitfalls and Recommendations

- Be careful about changing your system after you begin collecting data!!! **⚠ WARNING**
- If changes are necessary, update your data plan
- Ask the experts! CQMs are complex and require clinical knowledge, billing expertise, and logical thought processes
- Monitor your data to ensure successful reporting
- Projects such as the CCBHC reporting and EHR implementation require a lot of time and resources --- get buy-in from Executive Staff and be prepared for this investment

Hopes for Our Future

- Create dashboards so all levels can review relevant outcomes
- Use the information collected to make sound decisions
- Figure out the costs associated with the outcomes
- Continually improve the technology and workflows to help providers give consumers more efficient care

Grand Lake Mental Health Center

@NATIONALCOUNCIL

Police Interaction before First Responder

Police have to drive the individual in crisis to the nearest ER

And wait...
And wait...

Where they wait...

Police Interaction With First Responder

First Responder allows Peace Officers to have immediate access to:

A Peace Officer
A Regional Analyst
A Psychiatrist
A Physician Specialist
